ITEM 1

DISCUSSION/PRESENTATION REGARDING IMPACT OF MAJOR STORMS ON WATER MANAGEMENT BY SOUTH FLORIDA WATER MANAGEMENT DISTRICT. Requested by Councilman Bledsoe.

Stanley Hole, former Chairman of the South Florida Water Management District, thanked the Council and staff for their cooperation in water management and specifically noted the forward step being taken by going into the reuse of treated wastewater which will be accomplished when the new plant is completed. He also supported the City's continuing review of the common service area lines with the County. He then introduced Cathy Anclade, Public Information Specialist, and Steve Letro, meterologist. Mr. Letro reviewed the recent theory that had evolved about the number of severe storms or hurricane's to be expected in an upcoming year. He noted that the formula indicated about four severe storms for 1986. He noted that having information in advance of a severe storm would enable them to decide how much water to let run out of Lake Okeechobee.

In response to Mayor Putzell, Mr. Hole noted that the need for water to match the County's anticipated growth had been taken into consideration. He noted that Florida was rich in water, under the ground and on each side; the problem being the cost of using the water properly. He stated his belief that the cost of using the water resource was going to increase, noting the added expense of obtaining water from the Golden Gate wellfield rather than just from the Coastal aquifer. At some point in the future, he added, it may be cheaper to take water from the ground and desalinize it rather than transport it 30 miles. He also noted that south Golden Gate estates had an enormous water supply, but the cost of obtaining it properly would be expensive. Mr. Richardson concurred and noted the studies the County Infrastructure Committee had been doing and their recommendation for planning for revenue from both ad valorem taxes and special taxing districts in the future.

Mr. Hole noted that agriculture was a major force in the economy of Collier County and a major user of water, requiring raw water. In his estimation the Water Management District might allocate better water for agriculture and lower grade water for treatment for consumption. Responding to questions from Mayor Putzell, Mr. Hole explained the reasons to favor deep well injection of rainwater for later use, but noted that a 100% recovery was not possible at this time and that it was

					COUNCIL	OHHO	N	E	N	N	

expensive. He added that the program was still in the testing stage. He explained that they were trying to pump water that was headed for Naples Bay back upstream across the weir to recharge the area it came from.

In response to City Manager Jones' questions about the City's proposed well field plans that would ultimately pump 30 million gallons a day, Mr. Hole stated that different kinds of wells would be needed to pump the required amount of water during the wet season and dry season. He felt that cost would be a factor in the future and emphasized that the City accurately determine the costs. In response to Mr. Bledsoe, Mr. Hole stated that it would be up to the City and County to decide if they needed to establish a water authority. He stated his opinion that it would be a fiscal/service entity, not a source issue. The City Manager felt that the City could protect its present customers and the users who created a need to expand the system would have to pay a different rate. In response to a question from the audience, Mr. Hole explained that it cost Pelican Bay less to desalinize the quality of water they had than it cost Key West to have water pumped 120 miles, because of the quality of water Key West would have to desalinize.

In response to Mr. Graver's questions, Mr. Hole stated that he preferred to operate within the existing capacities without moving up to the maximum level of operation. He said that the conservation program promoted this spring was because of lowered ground water levels. City Manager Jones noted that some of the water pumped now for the City could be taken over by the County at a later date.

DISCUSSION OF WORKSHOP AGENDAS

Mayor Putzell noted plans to discuss upcoming ordinances and resolutions at the last workshop of each month and asked City Manager Jones what was planned for the Workshop scheduled for June 25. The City Manager responded that one discussion planned had been the widening of U.S. 41, which he would like to discuss today. Mr. Barnett stated that he would like to place a discussion on the upcoming agenda about the impact the opening of the Registry Hotel would have on Crayton Road. Mayor Putzell asked for an update and status report on that situation.

Mayor Putzell asked for a discussion of the CIP regarding what is underway, what may be carried over to next year and the priorities.

In response to questions from Mr. Graver regarding the County's beach renourishment study, City Manager Jones noted that the overall study aspects should be funded by the General Fund of the County, but any special studies with recommendations for City participation in the improvements, he felt the City could contribute to.

Mayor Putzell noted his desire to see some improvement in Lowdermilk Park included in next year's CIP. He also noted the bike path situation which he felt required some discussion.

Mr. Richardson noted his feeling that the County's CIP did not include any funds for Natural Resources, with the possibility of the City being an MSTS.

Community Development Director Barry noted that he planned to have a presentation for Council on June 25 concerning community appearance with representatives of the Planning Advisory Board (PAB) present along with Mr. Al French, local architect. Mayor Putzell asked that material concerning the PAB's recommendations prior to the workshop.

DISCUSSION - U.S. 41 WIDENING

Mr. Richardson reviewed the material in Community Development Director Barry's memo dated June 9, 1986 and his memo to the City Manager dated June 6, 1986 (Attachments #2 & #3). Mr. Richardson used a map on the wall to illustrate what the Department of Transportation (DOT) was studying with the firm of Hensley & Smith. He noted four-laning U.S. 41 from Four corners east to the Glades. He noted that one alternative was to do this within the existing right-of-way which he favored. Another alternative was to buy twelve feet on each side of the road and the other alternatives were to buy all the right-of-way on either the north or the south side of the road. He suggested that bicycles use the sidewalk; and after further discussion, it was the consensus of Council that the City Manager find out if that would be legal.

Mr. Richardson noted that one of the existing problems was the stop light at Four Corners and he suggested blocking off Fifth Avenue South in some way to alleviate the traffic handled by this stop light. He further suggested another alternative, making Fifth Avenue South one way for a few blocks. Community Development Director Barry suggested making Fifth Avenue South a pedestrian mall, or putting in a cul-de-sac at the Four Corners end. Mayor Putzell asked for some professional input from the staff showing the various alternatives to solve the problem with the traffic light at Four Corners. Mayor Putzell did not wish to involve the public until some study by staff had been done and studied by Council.

Mr. Richardson noted other places where work would be needed such as where Goodlette and Airport Roads meet U.S. 41, but he felt the biggest problem was the Gordon River bridges. He noted the need for an extra 12 feet on the north side of U.S. 41, which would remove the swimming pool at The Comfort Inn. He reported that Community Development Director Barry had suggested obtaining this right-of-way from the adjacent property owners. Mr. Barry did state that DOT would make the ultimate decision about what right-of-way would be used. He noted that the City was dealing with an area around the Gordon River bridges where some building permits will be requested in the near future and if the City knew what they wanted to do, some of the right-of-ways could be protected and be available when DOT makes a decision. He suggested a definitive study be made by a professional engineer and have the City's decision adopted by resolution so a prospective developer can dedicate the right-of-way.

Mr. Barry then suggested the same procedure be applied to acquiring property at the shopping center by Sandpiper so that street could be moved and one reasonable intersection developed. He answered questions from Council members by agreeing that this would have to be done with the County's cooperation and that he had discussed it with County staff people, George Archibald and Tom Kuck. He reported his impression of a conversation with Mr. Kuck, County Public Works Administrator, that when funds were availae, the City could be reimbursed. Mr. Graver felt this step might accelerate the whole project. City Manager Jones cautioned Council that the County had more residences accessed by Sandpiper than the City and suggested that the County do the entire intersection. Richardson suggested notifying the county and Hensley & Smith of this proposed action. Mayor Putzell asked him to draft one. Mr. Richardson also asked that Council write to Mary Ellen Hawkins, State Representative, to encourage passage of legislation to assess up to 5¢ additional gas tax for capital improvement programs on highways and that counties and cities can loan money to DOT which could be paid back under a contract. SUBJECT:

U.S. 41 Widening/City Council Workshop Session

DATE:

June 9, 1986

I attended a meeting with Mayor Putzell and Councilman Richardson in Don Lusk's office on Friday, June 6, 1986.

In addition to discussing another bridge over the Gordon River in the vicinity of the airport, we discussed a June 5th presentation by Hensley-Schmidt Inc., an engineering firm from Orlando, regarding U.S. 41.

This firm has contracted with FDOT to study U.S. 41 between "Four Corners" and Henderson Creek. There is little doubt that some improvements will have to be made in this section of U.S. 41 to improve traffic flow, safety, etc. This firm presented a variety of improvement suggestions at their June 5th presentation, including making 5th Avenue South one-way west of "Four Corners" - closing 5th Avenue South from 8th Street to 9th Street and establishing a pedestrian mall, building a new parallel bridge span in the vicinity of Tin City involving a one-way traffic flow on U.S. 41, building a "fly over" in the vicinity of Davis Boulevard/U.S. 41, and a redesign and relocation of the U.S. 41/Sandpiper intersection. All of these suggestions will undoubtedly be debated at great length and will not be acted upon any time soon.

One other suggestion, however, stands out as being quite logical, reasonable, of immediate necessity and should not have to be the subject of endless debate; that is, to acquire additional right-ofway and widen U.S. 41 between Goodlette-Frank Road and Sandpiper Street. Although it is possible to eliminate or reduce the width of the existing medians, it seems preferable to keep them as a traffic separator for left turn lane pockets and as landscaped areas.

Hensley-Schmidt suggested the need for an additional 10 - 12 feet of right-of-way on each side, or 24 feet on one side, with a somewhat greater need at the northeast corner of U.S. 41 and Goodlette-Frank Road (Comfort Inn site). The additional right-of-way will accommodate the addition of one traffic lane in each direction and an additional turn lane at Goodlette-Frank Road.

In my conversation with Mayor Putzell and Councilman Richardson, it became clear that we should discuss this matter with the City Council at a workshop session on June 25, 1986.

Given the pending and anticipated development projects in this area, I think it is important that we act as quickly as possible to define right-of-way needs, establish a specific "plan line," and adopt any required ordinances to enable the city to require the necessary right-of-way dedications before building permits are issued for any more construction in this area.

Attachment #2 - Page 2

TO: Frank Jones, C.M.

SUBJ: U.S. Widening

Page 2. 6/9/86

If dedication is not possible, we should explore the possibility of acquisition. I understand that the state will reimburse the city ("as funds become available in the future") for such acquisitions.

It is clearly going to be a long time before the state even completes the present study, let alone acquires property and undertakes the widening.

I suggested that we may want to contract with Hensley-Schmidt, Inc. to provide the "plan line" information we need since they have already completed a lot of the basic research.

Please advise if you wish any additional information or clarification.

B/d

cc: Mayor Putzell

Councilman Lyle Richardson

Given the pending and anticipated development projects in this area, I think it is important that we act as quickly as possible to define right-of-way needs, establish a specific "pian line," and adopt any required ordinances to enable the city to require the necessary right-of-way dedications before building permits are issued for any

--- MEMO --

TO: Franklin C. Jones, City Manager

FROM: Lyle S. Richardson, Vice Mayor

DATE: June 6, 1986

Based on the alternatives presented by Hensley-Schmidt on June 5, 1986, for improvements to US 41 between Four Corners and the Glades, I feel the City should take some positive action in two areas.

The City of Naples should start proceedings to acquire or protect rights-of-way from Goodlette Road to the eastern bridge. It is imperative that we protect 12 feet on each side of US 41, with 24 feet on the north side from Goodlette Road to the start of the abandoned gas station so that DOT can 8-lane the road and add a right turn only lane approaching Goodlette.

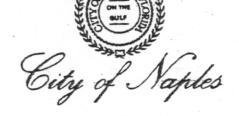

The proposed relocation of Sandpiper would satisfy the needs of this area through the year 2010 without a flyover. Our Engineering and Planning groups should, with counterparts, define the new road, acquire rights-of-way and assess the cost so that the MPO and DOT can move forward at once.

Additional information on these improvements is available.

--- MEMO -

TO:

HONORABLE MAYOR AND MEMBERS OF CITY COUNCIL

FROM:

CITY MANAGER FRANKLIN C. JONES

SUBJECT: U.S. 41 WIDENING

DATE:

JULY 23, 1986

BACKGROUND: The City Council discussed various proposals to widen the U.S. 41 right-of-way east of Goodlette-Frank Road at a recent

workshop session.

Jerry Gronvold has since discussed the proposed widening alternatives with Hensley-Schmidt, Inc., the traffic engineering consultants for the Florida Department of Transportation. We have concluded that the most acceptable alternative is to generally add 13 feet to the north and south sides of the existing right of way as depicted in the attached exhibits.

Section 6-27 of the Zoning Ordinance provides that the City may require a property owner to dedicate additional street right of way based on a determination of the City Council that such a dedication is necessary. Such a determination is to be based on a recommendation by the staff and the Planning Advisory Board.

If the City Council ultimately decides that additional right of way is required, we propose that the additional right-of-way be dedicated to the City in conjunction with the issuance of abbilding permit for any new construction on the subject properties.

STAFF RECOMMENDATION: We recommend that the City Council discuss this matter at the workshop session scheduled for July 30, 1986. If the City Council wishes to proceed as discussed above, we recommend that they direct staff to place this item on the September Planning Advisory Board agenda and notify the affected property owners prior to that meeting.

The City Council could then take final action on the matter at their September 17, 1986 meeting.

Respectfully submitted,

Franklin C. Jones City Manager
