43. **FAILURE TO DELIVER:** In the event of the contractor to fail to deliver services in accordance with the contract terms and conditions, the City, after due oral or written notice, may procure the services from other sources and hold the contractor responsible for any resulting purchase and administrative costs. Notes:

1. Contractor shall review all site characterization and geotechnical reports included within bid package.
2. With the exception of the immediate areas surrounding the soil boring undertaken, due to the minimal number of soil borings within the vicinity of the proposed improvements, the earthwork and volume calculations assume that the average depth (thickness) of debris is approximately 9.8-feet.
3. Excavated debris volume consists of approximately 69% soil and 31% municipal solid waste. In order to accommodate for the cap soil volume over the debris areas, which varies in depth, it has been assumed that the percentage of soil that can be retained and utilized for structural fill is approximately 70%.
4. The Contractor's bid proposal shall assume the material onsite can be screened and be used for structural fill. No imported fill is anticipated.
5. The Contractor's bid proposal shall assume all debris materials can be relocated onsite. No offsite removal is anticipated.
6. The site requires approximately 84,995 CY of fill (compacted in-place) to support the designed finished grades and contour elevations from the proposed undercuts for the Project. Please note the proposed finished grades and contour elevations have been designed to address an assumed 30% compaction/loss factor from the screening operation and relocation of fill and debris materials onsite. Unless the quality of the screened material does not meet the geotechnical engineer's specifications for the Project, no imported fill is anticipated.
